Marketing Campaign Performance Dashboard (Excel)

Business Context:

Marketing teams invest heavily in multi-channel campaigns (Google Ads, Facebook, etc.) to reach their audience and drive revenue. However, raw campaign data lacks business value unless transformed into clear, actionable insights.

Business Objective:

- Track the performance of marketing campaigns across platforms and regions
- Analyze profitability, efficiency, and return on ad spend
- Monitor key KPIs like Click-Through Rate, Cost Per Click, Conversions, and ROAS
- Build an interactive Excel Dashboard for real-time decision-making

---

Problem Statement:

Transform raw marketing campaign data into a comprehensive Excel dashboard using advanced Excel techniques. The goal is to enable stakeholders to monitor real-time performance, identify underperforming channels, and optimize marketing investments.

Dataset Overview:

Dataset:- Marketing_Campaign_Data.xlsx

Dataset: Marketing Campaign Performance Dataset (500 rows)

Column Name	Description
Campaign_ID	Unique campaign identifier
Date	Date of campaign activity
Channel	Marketing platform (Google Ads, etc.)
Region	Geographic region of the campaign
Budget ($)	Budget allocated
Spend ($)	Actual spend
Impressions	Number of ad views
Clicks	Number of clicks on ads
Conversions	Customer actions (sign-ups/purchases)
Revenue ($)	Revenue generated from the campaign

Project Workflow:

1.Data Understanding:

- Review structure, data types
- Distinguish categorical (Channel, Region) vs numerical (Spend, Revenue, etc.) columns
- Understand campaign lifecycle

2 Data Cleaning / Preprocessing:

- Remove duplicates
- Fix formatting in columns (e.g., numeric currency columns, date format)
- Check for nulls and clean as needed

3 Data Transformation:

- Create new calculated columns:
    - **CTR** = `Clicks / Impressions`
    - **CPC** = `Spend / Clicks`
    - **CPA** = `Spend / Conversions`
    - **ROAS** = `Revenue / Spend`
    - **Profit** = `Revenue - Spend`
    - **Profit Margin %** = `(Profit / Revenue) * 100`
- Extract `Year-Month` from `Date` column for trend analysis

4. Dashboard Components:

Create an **interactive Excel dashboard** with:

Visualizations:

- **Trend**: Spend vs Revenue over time
- **Bar Charts**: Channel-wise ROAS, Region-wise Conversions
- **Pie Chart**: Budget allocation by channel
- **Funnel**: Impressions → Clicks → Conversions

Filters / Slicers:

- Channel
- Region
- Date Range

Next Steps

1. Push the Project to GitHub

- Create a repository titled **"Amazon-Sales-Analysis-Excel-Dashboard"**.
- Upload the dataset, cleaned file, Pivot tables, and final dashboard.
- Add a clear README with the problem statement, workflow, dashboard screenshots, insights, and recommendations.
- This helps showcase your practical data analysis skills to recruiters and organizations.

2. Post the Project on LinkedIn

- Share your project as a professional post.
- Include:
    - A short summary of the project
    - Skills used (Excel, Data Cleaning, Data Analysis, Dashboarding, Business Insights)
    - Key insights you discovered
    - Dashboard snippets
- Tag relevant communities such as **Innomatics Research Labs**, mentors, and your network to increase visibility and engagement.

3. Add the Project to Your Resume

Include it under **Projects** or **Work Experience (if applicable)**:

Customer Purchase Behavior Analysis Retail Fashion

Developed an end-to-end data analysis project using Excel. Performed data cleaning, preprocessing, KPI creation, PivotTable analysis, and dashboard design. Delivered insights on revenue trends, product performance, customer behavior, and operational metrics.
Skills: Excel, Data Cleaning, PivotTables, Dashboarding, Business Analysis.

This strengthens your resume and demonstrates hands-on analytics capability.
